

ASP Website Setup on WarnerTech.Net, LLC Servers

1. Please provide us with your computer service persons contact information. This may be someone internal, external or another company.

2. Will we be providing DNS (Domain Name Server) service? Yes No

If yes please provide us a list of the present DNS entries and go to step #3. If we will not be providing DNS service for this client, we will provide you or your technical person the IP address for the new web site location prior to its activation, skip item #3.

3. Determine the specific Domain Name(s) involved. If we will be making the DNS pointer entry changes, we will require access to the Domain Name account at the Registrar.

4. Please provide the Domain Name(s) to the person(s) setting up the website as they will be needed to configure IIS.

5. If the Client will be using WarnerTech.Net, LLC email service, please provide us with a list of email usernames, full names and passwords. If passwords are not provided, we will create them and send them to you after the email account has been created.

Note: FTP setup and support of an Exchange server configuration is outside the scope of this contract. However, FTP services can be provided under a separate contract. We will work with your technical people to insure the mail configuration will work properly with an Exchange server.

Note: we will provide clients with phone/interactive support to setup email clients on their computers.

Warnertech.Net, LLC also provides clients with a web mail service at no additional charge.
